

COMPANY INFORMATION

- *Sterling Products* is a specialty service manufacturer, experienced in producing acrylic components with various methods: Blow Molding, Vacuum Forming, Bending, Fabricating, Select Injection Molding.
- Various shapes include:
Domes, Bowls, Cones, Bells, Channels, Drums, Torchiers, Cylinders, Pyramids, Hemispheres, Quarter Spheres, Wall Sconces with or without back. Plus a complete line of ADA Fixtures.
- We operate a specialty custom model, molding and jigs department. We offer pattern development for new molds and duplicating of existing parts. A large library of tooling, rings and molds are available to our customers at no charge.
- We are equipped for cementing, flame polishing, sand blasting, routing, stripping, drilling, etc...
- We are known for our natural looking materials. We imitate Glass, Alabaster, Marble, Etruscan (scavo), Granite, Mica, Horns, Tortoise and metals (Brass, Copper, Gold, etc...). These materials offer the natural look without the price, handling and breakage associated with Glass or Marbles. These materials will not yellow, age, or disintegrate with time.
- Custom color matching is available at minimal or no cost to our customers. Free color samples are available upon request.
- Our equipment and materials offer large diameter products that are impossible to make in Glass or Marble. The natural Strength of Acrylics reduces packing and shipping costs.
- Our turn around time (lead time) is prompt and does not compromise on quality.

HOW TO

HOW TO USE OUR CATALOG

The Sterling Products catalog should be used as a guide. It allows one to view various shapes, techniques, colors and most importantly the Open Molds Library. Each of these categories should be used in creating your fixture. The catalog shows a range of possibilities, do not forget to use your imagination.

THINGS TO KEEP IN MIND

Quality is an important issue with Sterling, all parts are inspected before they leave the factory. In order for our inspection department to do it's job effectively we require that if parts fit in metal frames or backs we must have this metal before production starts. This metal will be used in making the tooling and inspection before the part is sent out. It is important to remember that each piece is hand made from start to finish, from casting to forming to cutting to sandblasting. Each acrylic sheet is hand casted individually therefore the grain pattern will vary slightly from sheet to sheet. If you require a "light" sheet vs. a "dark" sheet then you must specify so. Also note that the color swatch on the color chip chain is a very small representation of what the finished part will look like. We keep 6"x6" color chips on hand at all times. Let us know if you need a larger sample of a specific color sent to you. Keep in mind that all parts can be made in other dimensions with new tooling or the new dimensions may already exist but may not have been entered into the catalog.

HOW TO REQUEST A QUOTE

When you are ready to request a quote, we ask that you either mail, e-mail or fax a sketch with the dimensions, thickness, color, finish and quantities you will be using. Once a sketch is received it will be reviewed and quoted immediately. Many times you will see an option which will alter the original dimensions of the drawing and offer the part at a lower cost.

HOW TO PLACE AN ORDER

Once you are ready to place an order we ask that you fax us a written purchase order. Please state clearly the items you are ordering, purchase order number, reference quote number, and shipping instructions. If it is an item you are re-ordering from Sterling Products, please use your allotted Sterling Products part number. This part number can be found on your previous invoice, or just let us know if is a re-order.

Any changes to the purchase orders must be faxed to us in writing.

FABRICATED WITH SEAM

FABRICATION

Pictured above are fabricated cylinders, square tubes, cones and wrapped cones. All parts besides the wrapped cone are made with a seam. Each seam is cemented and reinforced with an acrylic rod.

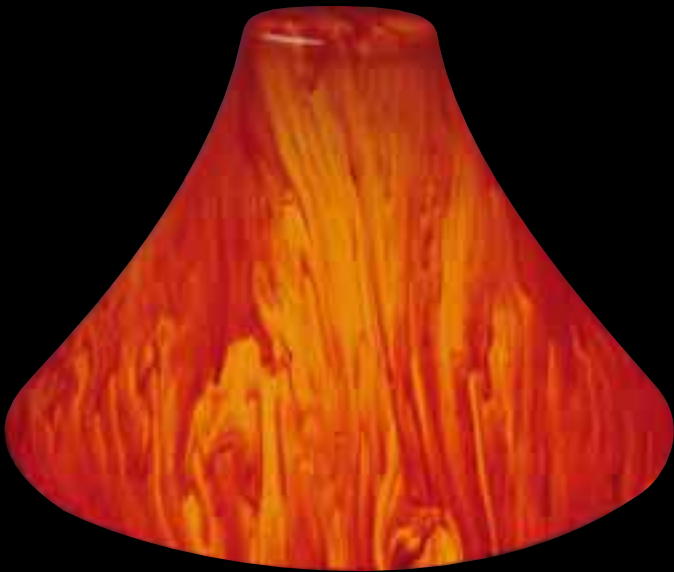

Note: any part that must fit into any sort of frame, cap, metal etc., must be provided to Sterling Products before production. Fabricated cones can not be produced with a closed point. Square tubes do not have 90° corners, unless manufactured from four flat beveled panels. Some cylinders or drums, depending on size, may need to be made of two parts, with two seams.

THE ADA LINE

Americans with Disabilities Act

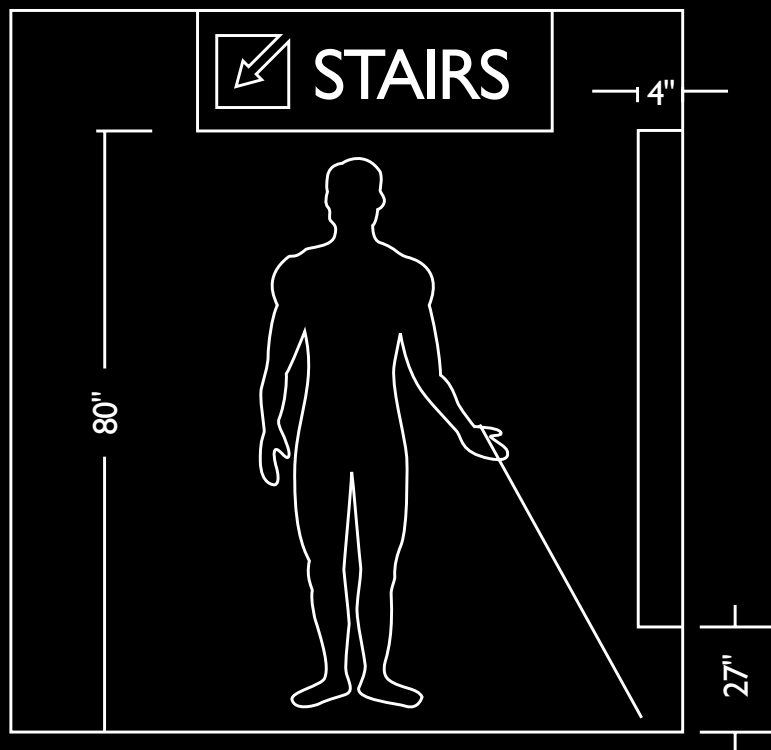

On July 26, 1990 a national act against discrimination of persons with disabilities came to pass. The act refers to several fields, namely: Public Services, Telecommunications, Transportation and Employment.

The Architectural & Transportation Barriers Compliance Board, published guidelines for manufactures and designers of: wall sconces, lighting fountains, phone booths etc., for them to comply with the act.

The general requirements are as follows:

80" clear head room at all walkways, corridors and halls.

All objects mounted on walls, that are between 27"- 80" high, should not project more than 4" into the walkway. STERLING PRODUCTS is proud to be a part of the ADA act, and therefore presents an extensive line of components for ADA fixtures.
